I build simple & functional custom web applications with rich UX.

I work with growth mindset and very persistent in problem solving.

I pay great attention to detail in every problem I delved into.

TECHNICAL KNOWLEDGE

I work on PHP7 & Javascript (es6) stack. I use laravel & vue framework for most projects. I follow TDD approach to write code. TailwindCSS is my first choice for css stuff.

I primarily use MariaDB for database and redis as cache & broadcasting driver. I use Sentry for bug tracking & TravisCI for continious intregation.

I use Docker based tools for local development and production. I use DigitalOcean for personal projects, but I've used AWS EC2, S3 & other services for professional work.

INTERESTS

I'm learning nativescript-vue currently. GraphQL & ReactNative is on my list to learn next. I've played with golang & AWS lambda (written couple of lambda function with go) before and will definitely try again. And finally Dart and Flutter is on my list to learn this year.

PROJECTS

GOODWORK

https://github.com/iluminar/goodwork

Self hosted project management and collaboration tool. I worked from ideation to implementation and managing collaboration in this project.

Stack: Laravel, VueJS, TailwindCSS, Docker, TravisCI, socket.io

WORK HISTORY
